

## Custom lighting for the fleet of

## Ireland's flag carrier airline

As part of a line of recent innovations introduced at Aer Lingus, the airline chose to invest in enhancing the comfort of their guests with a fully customised mood lighting system - *Cobalt Spectrum*.

Guests on Ireland's only four-star airline can benefit from class-leading LED mood lighting, programmed to set an ideal ambience on each phase of the flights. Whether on a short or long journey, Aer Lingus passengers can experience carefully curated lighting scenes that are designed to minimise the effects of jet lag and deliver them to their destination refreshed and relaxed.

A lavender scene creates a calm and ambient cabin, blue tones help passengers to feel at ease during boarding and disembarking and, for passengers flying long-haul, a sunset orange scene mimics the setting sun to gently energise and prepare guests for landing.

We worked closely with the Aer Lingus team to test thousands of colour variations, taking into account the furnishings, food, cabin crew uniforms and more. Each lighting scene was designed to both complement Aer Lingus' new, refreshed brand and to enhance the cabin during various times of the flight.

Of course, we couldn't work with Ireland's flag carrier airline without adding an extra special 'promotional mode'. Selected Aer Lingus aircraft can be lit with their brand teal colour, flooding the cabin with spectacular emerald green light. Look out for it during special events!

**Aer Lingus** 

We are delighted to unveil the new LED mood lighting system, which will further *enhance the Aer Lingus guest in-flight experience*.

In recent years we've invested significantly in our business...this mood lighting system is the latest initiative to *improve our guests' comfort on-board*.
