

**The excitement of innovation:**

**invisible wireless chargers**

**GDC Technics chose *Cobalt Unplugged* to spearhead the next generation of innovative cabin power products for their latest wide-body completion programmes.**

We were delighted that GDC Technics selected *Cobalt Unplugged* wireless charging units to integrate into their wide-body cabin interior designs.

Passengers flying on these aircraft can now charge any Qi enabled device – be it phone, tablet or laptop – without the need for untidy wires or clunky sockets and adaptors. Designed to seamlessly slot into any cabin design, *Cobalt Unplugged* units have been integrated into a variety of locations in collaboration with GDC Technics, including tables, side ledges, bar tops and arm rests.

*Cobalt Unplugged* units are lightweight, slim and compact. Inclusion in the designs created by GDC Technics was simple, ensuring their aircraft cabins remain slick and stylish.

Our collaboration with GDC Technics led to the integration of our wireless charging units into multiple FAA STC certifications – with more in the pipeline in the future.

## **GDC TECHNICS**

At GDC Technics we craft the most desirable and exclusive personal transportation in the world. We always seek out the ***most innovative solutions*** to meet our customer's needs, which is why we chose Cobalt Aerospace to provide us with their *Cobalt Unplugged* wireless charging units.

The units offer ***amazing performance***; when a client says 'wow' you know you are providing the ***level of innovation that brings excitement to their travel experience.***
